JASPER SERVER OS	2
BUG FIXES VERION 10.0.1	2

JASPER SERVER OS

10.0.0 pulls Jasper Server OS through the Jakarta migration, allowing deployment on new application servers and enabling further security updates. A very useful upgrade is supporting Jasper Reports written for versions 6 and 7 of the JR library, allowing easy migrations from JRS 8.4.x and earlier versions.

For full update documentation please refer to 10.0.0 Release Notes.

BUG FIXES VERION 10.0.1

- Fixed a bug where charts Jasper Reports version 6 reports could not be executed if certain properties of the axis formats were set
- Fixed a problem with SMTP configuration for scheduled reports - scheduled reports can now send mail notifications normally
- Fixed an error in buildomatic (command line) import/export on Linux. Previously, only GUI imports worked
- Fixed an error when importing schedules with buildomatic (command line)
